

**IT'S THE
DOTS
THAT MAKE
THE
DIFFERENCE**

Efficient with all types of load:

*Folding Carton
Cardboard Boxes
Corrugated Trays
Paper Bags
Plastic Bags
Glass
Metal
Rubber
Wood
And many more*

**GRIP
SHEET
SHEET®**

Protecting your products...and your profits.

GRIP SHEET® is a non-slip, stabilizing, protective insert paper sheet that holds loads in place by increasing the coefficient of friction between the layers on a pallet and therefore reduces breakage and protects products distributed on pallets.

GRIP SHEET® is available in recycled kraft and in a waterproof version. It is offered in a variety of standard paper weights, widths and lengths to best fit your application.

Made of recycled paper coated with the exclusive non-slip coating. Other non-slip recycled substrates are available such as 100% waterproof, a one-side PE coated, Kraft paper, white paper, printed paper, etc. The most popular packaging is a pallet load of sheets of dimensions suited to fit the most popular 48" x 40" sized pallets

Grip Sheet® is re-usable and recyclable

Why Grip Sheet®

- Reduces Slip between layers
- Stabilizing of loads
- Reduces the damages caused by slippage
- Reduction of Cost caused by slippage
- Reduces other Packaging materials
- Isolation of Products
- Not just a financial loss saves your reputation too

Main Characteristics

- High coefficient of friction
- Up to 38° of tilt with the standard coating
- Up to 45° of tilt with the superior coating
- Identical non-slip performance on both sides of the sheet
- Can be installed manually or automatically
- Does not stick to itself or the product
- Stabilize loads of all kinds
- Grip Sheets keeps original packaging intact without marking or tearing it

Benefits

- Reduction of damages
- Reduction of load shifting on pallet
- Stabilization of unstable containers
- Increase in customer satisfaction
- Safe stacking of loads on pallet
- Increase of load per pallet / reduces the number of pallets
- Reduces handling, transport costs, and pollution while it also helps increase sales
- Reduction of costs, delays and injuries caused by loads falling during handling and transportation
- Facilitate the handling of loads on pallet before stretch film
- Elimination of stretch film for internal handling and warehousing
- Reduction of the packaging costs, warehousing space and handling of packaging materials
- Improvement of your products and company's image
- Dangerous or fragile goods are held down securely
- Can be fully automated or inserted manually
- Grip sheets are totally non toxic and dust free
- Grip sheet paper can be recycled and reduced to paper pulp
- Pallets handled safely with no risk of breakages
- Is non adhesive and water resistant
- Reusable & Recyclable
- Protects products against humidity coming from the pallet
- Prevents crushing of goods when goods are packed using column stacking with Grip Sheet
- Grip Sheet is water repellent and has a low permeability to gases. It helps in the protection of products from moisture
- Grip Sheet has a low unit price and is comfortably competitive with alternative methods of stabilization
